- Create a news list

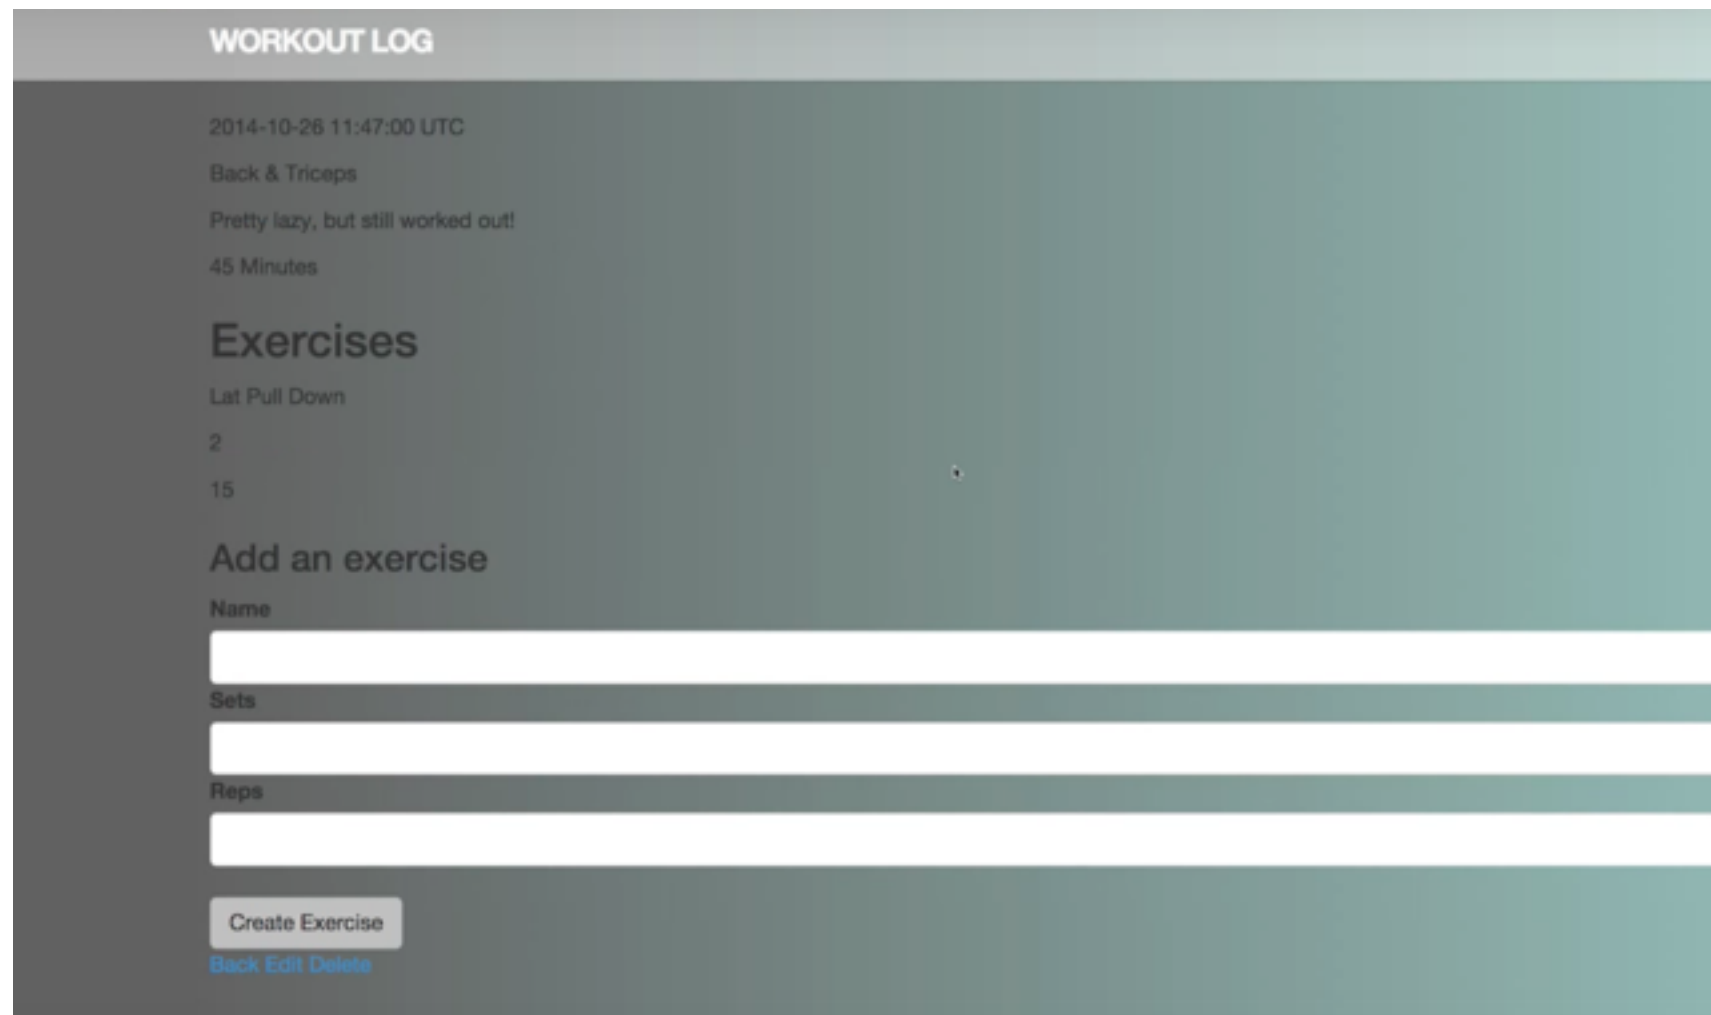

# Requirements

- Posts (Jobs or other content)
- Multiple pages and routes
- User can add content
- User can click on content for more information
- Filter content
- Optional: Two models

# Final Project

- Idea be anything!
- Can build a website to solve a problem you have!
- Here is an example of a workout tracker

The screenshot displays a web application titled "WORKOUT LOG". It features a dark-themed interface with a teal accent color. The main content area shows a workout log entry for "2014-10-26 11:47:00 UTC" with the exercise "Back & Triceps", a note "Pretty lazy, but still worked out!", and a duration of "45 Minutes". Below this, there is a section titled "Exercises" showing a list of exercises, including "Lat Pull Down" with 2 sets and 15 reps. At the bottom, there is a form to "Add an exercise" with input fields for "Name", "Sets", and "Reps", and a "Create Exercise" button. Below the button are links for "Back", "Edit", and "Delete".
